SHARED ROAD/"WOONERF"

- A woonerf is a living street where pedestrians and cyclists have legal priority over motorists as implemented in the Netherlands, and other parts of Europe
- Techniques include a blend of traffic-calming measures:
 - reduce traffic speeds to 'footpace'
 - trees planted to break drivers' sight lines
 - wider pavement/pavers on road
 - raised mid-block crossings
- Similar to the USA's complete streets - where priority is given to all modes of transportation, including automobiles, bicycles, & pedestrians
- Examples in US: "street-parks" in Seattle and Wall Street in Asheville

TEMPORARY ROAD CLOSURES

- Temporarily close off street for varying purposes, such as:
 - special events/game days
 - every Saturday and/or Sunday during warmer months (May-mid October)
- Precedents:
 - "Summer Streets" in cities, including New York and Seattle
 - "Bike Days Miami"
 - Temporary closure on Saturdays and Sundays of JFK drive in Golden Gate Park
 - Central Park Dr. in Central Park NY

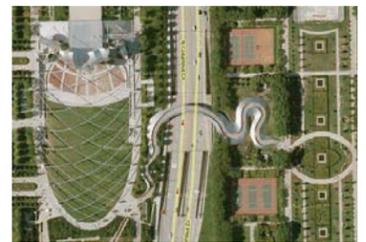

COMPLETE STREETS

- Design street to be safe, convenient, and comfortable for users of all ages and abilities regardless of their mode of transportation
- Allow safe travel for walking, biking, driving automobiles, riding public transportation, or delivering goods
- Complete streets include:
 - pedestrian lighting
 - Wide sidewalks
 - Street trees
 - On-street parking
 - Bike lanes

SAFE PEDESTRIAN CROSSINGS

- Provide safe crossing at ends and middle of block
- This could be:
 - raised crossings
 - mid-block crossing with flashing pedestrian lights
 - large, striped crosswalks

SPECIAL PAVING PATTERN

- Provide a surface treatment to road - i.e., pavers, colored concrete - to differentiate road from other streets
