

Overview of Identified Study Areas

Total Acres (for all areas combined): 15.7

Total Number of Properties: 198

Boundary Areas: The boundaries for this work have been identified using an existing reconnaissance survey, the capstone survey, planning landuse maps, and historic streetcar maps overlaid with property information. Then, the identified study areas were evaluated and prioritized considering the following: the policies drafter for the City's new Comprehensive Plan, under-represented resources in the current body of designated properties, locations likely to experience redevelopment pressures, and properties that are most endangered.

 Study Area

Minneapolis CPED, 1/8/19
